

Set Up Enviroment for PHP

1. Install XAMPP

- Step1: Download xampp in the link below: <https://www.apachefriends.org/download.html>
- Step2: After getting .exe file, double click to this file and do all the instructions to install xampp.

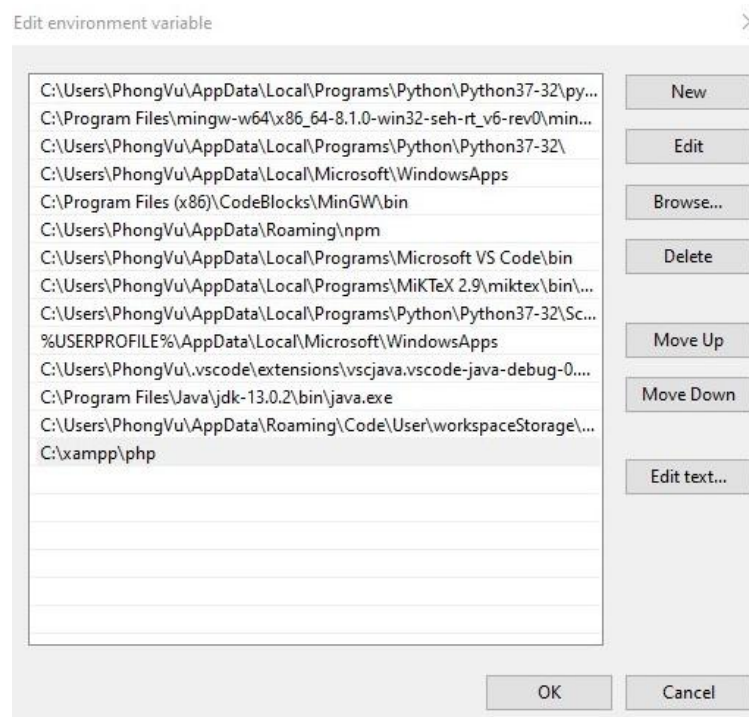

2. Set up XAMPP

- Step3: Open xampp, and start Apache and MySQL as figure below:

3. Set up Enviroment variables

- Step4: Open xampp installation folder (I save it in C:\), go to php folder which contains php.exe. In my case, path: **C:\xampp\php**
- Step5: Add this path to environment variables as below:

Set Up Enviroment for PHP

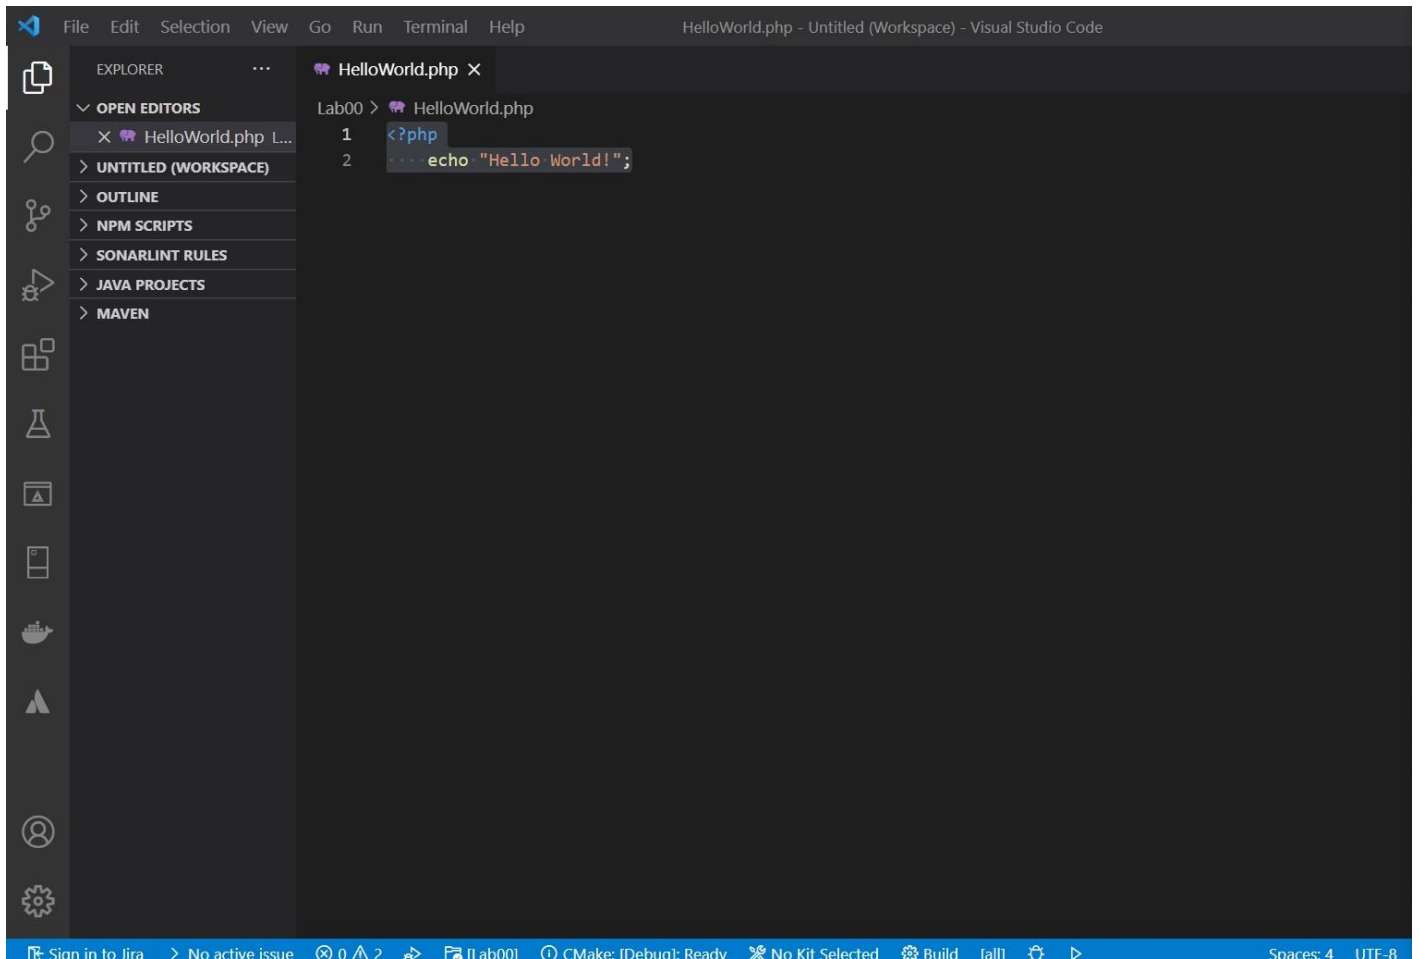

4. Install IDE

There are many IDE which is suitable, in my case, I choose Visual Studio Code.

- Step6: Download VS code in the link below:
<https://code.visualstudio.com/>
- Step7: After getting .exe file, double click to this file and do all the instructions to install VS code.
- Step8: Because we use VS code, we need to install Extensions: **PHP Intelephense**

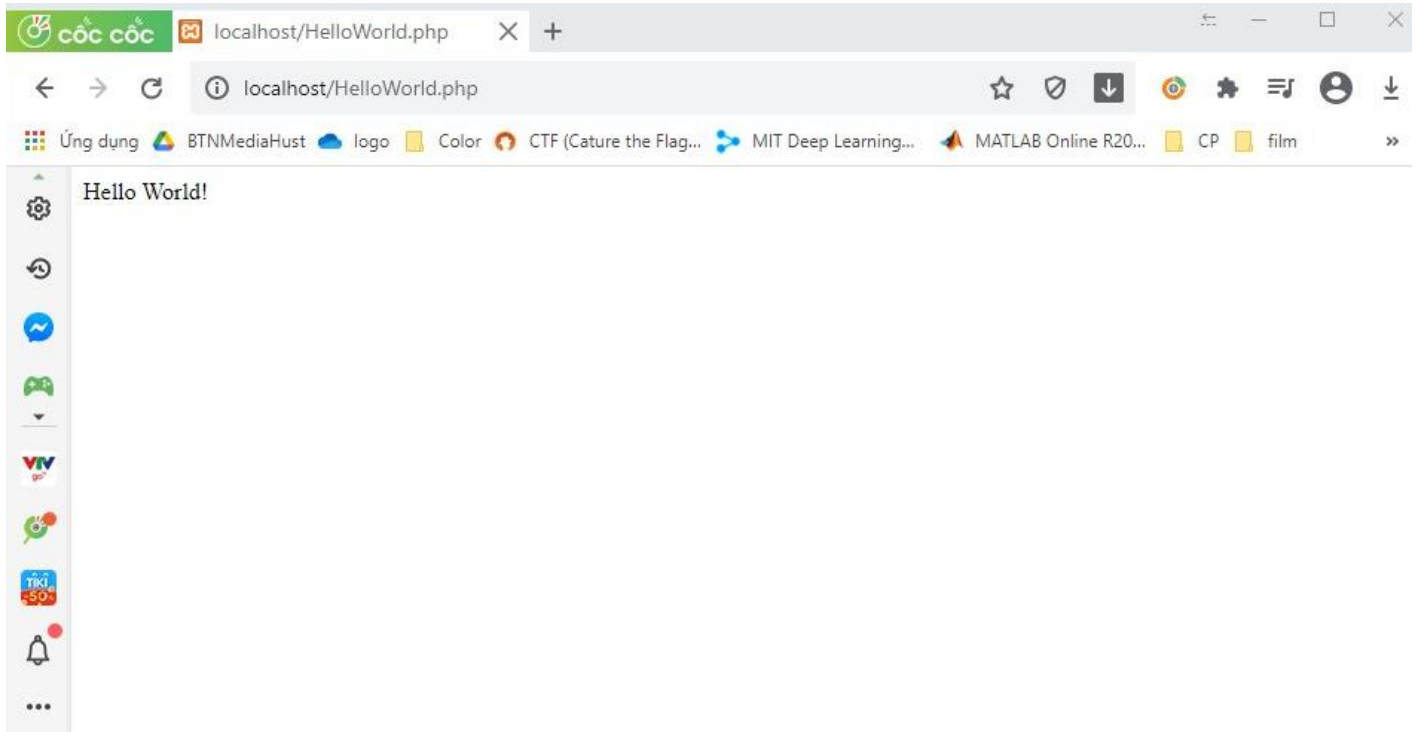

5. Hello world!

- After doing all step above, Open xampp installation folder (C:\), open path (C:\xampp\htdocs).
- Create file "HelloWorld.php".

Set Up Enviroment for PHP

- Open the path:
<http://localhost/HelloWorld.php>
